		Primary Examine Art Unit: 2873					

U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06) Continuation of 11. does NOT place the application in condition for allowance because: Regarding the arguments that Matsugu et al (US 5,625,408) does not teach or suggest that the quality of the images or degree of certitude of classification of images is used in controlling the postioning of the cameras, the Examiner points out that Miehle et al (US 6,247,812) at col. 10 and 5 (pointed out in Final Rejection) does compare the fundus images (data layers) and by comparing them, inherently evaluates them. The combination of Miehle et al in view of Matsugu et al is considered proper in view of KSR v Teleflex, 82 USPQ2d 1385, since using Matsugu et al provides the predictable result of controlling the positions (or new settings) of the image generating devices. The alternative language of claim 9 and 17 do not require the illumination to be positionally controlled. Regarding claim 14, again, the language is in the alternative and does not require the intensity of the laser beam to be changed.
